Okta Integration Guide

Prerequisites

OIDC integration requires the following:
- Access to the Attribute platform and effective Enterprise contract.
- Access to Okta Admin dashboard and required privileges to add an application.

To configure the integration, please follow the **Configuration** section.

Supported Features

Currently, the Okta integration supports SP-initiated SSO (Single Sign-On).

attribute

Configuration

In Okta

1. Navigate to the **Applications** section of the Okta Admin dashboard, then click **Browse App Catalog**.

2. Type "**Attribute Dashboard**" in the search box, then select the result named simply "**Attribute Dashboard**" and click Add Integration.
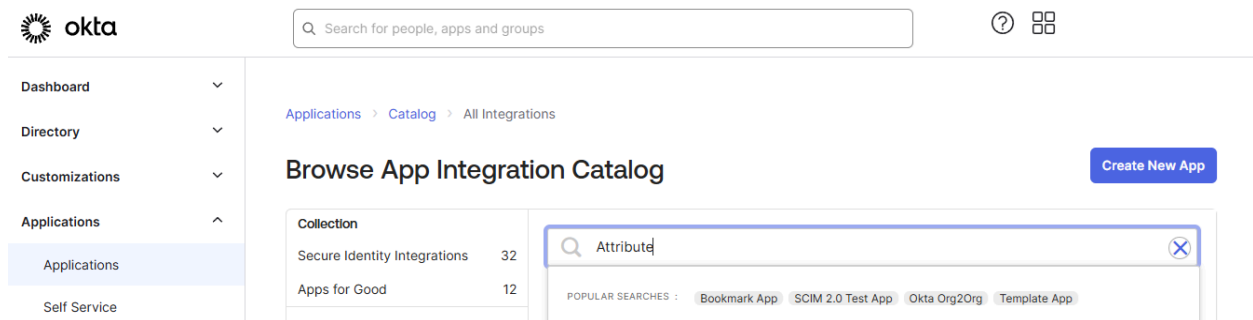

3. Configure the application and complete the configuration by clicking **Done**.

4. Go to the **Applications** section of the Okta Admin dashboard, then click on "**Attribute Dashboard**" and then on **Sign On**.

5. Under OpenID Connect copy the Client ID and Client secret fields.

Attribute Platform

1. Create a support ticket by sending an email to support@attrb.io titled "**Okta Integration Request**"

2. In the email's body, provide the following:
   a. Organization domain name
   b. Organization's Okta Issuer (e.g. acme.okta.com)
   c. Provide a link to a secure file share containing the Client ID and Client secret

3. After processing the request, a reply email will be sent confirming the integration.

4. When integration is completed, users can use okta to sign in directly or after inserting their mail in the dashboard's login page.

attribute

SP-initiated SSO Login

1. Navigate to Attribute Dashboard using the login link provided during the onboarding process.

2. Enter your user email, if the Okta configuration is configured **"Continue with Okta"** button will become enabled.

3. Click on **"Continue with Okta"** and complete the login process.

4. On success, you will be redirected to the application.

Troubleshoot
